Dear Sumi,

I'm already working on it. You'll have the report as soon as possible.

The 205clostri-project seemed to follow its usual course; we were actually making really good progress with the sequencing... For all we know now the contamination comprises at least two districts. There are a couple of thousand possible infections, but we don't know for sure.

Are you worried because you think the drinking water in your home could have been affected as well? I can assure you, the contaminated area does not include Floridsdorf.

Silver

Dear Silver,

Please send me your damage report on the failed clostridium project. I need your report by tomorrow. We are all more than dissatisfied about what happened. We can't risk that kind of negative public attention. Remember the reactions to the water contamination at the "Juridicum"? We should figure out what exactly went wrong, immediately. I'm personally very concerned too. How many possible infections are we talking about?

Sumi
