Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential. (The ICs should be stored in that manner until mounted on the circuit board.)

Fig. A

Fig. B

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

Fig. C

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
 - Use a paper clip modified by soldering in a wire braid insert.

Fig. D

Make sure that there is no solder on the inside.

Fig. E

Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).

Fig. F

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

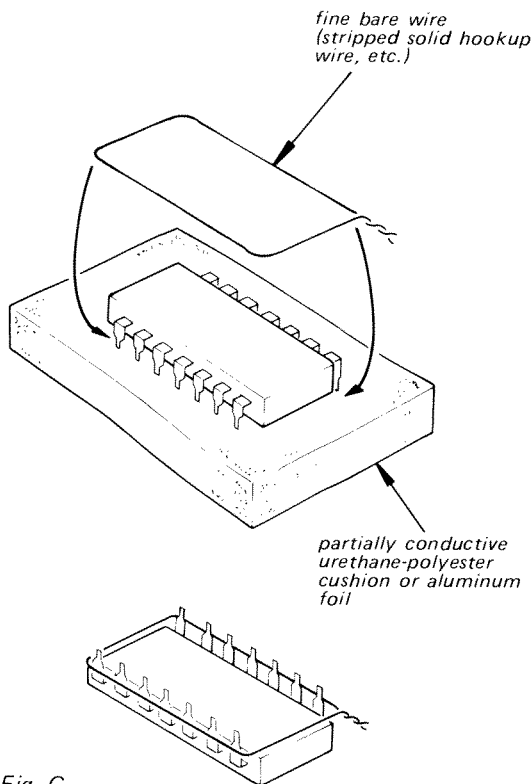

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

Fig. H

5. Method of Mounting

Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

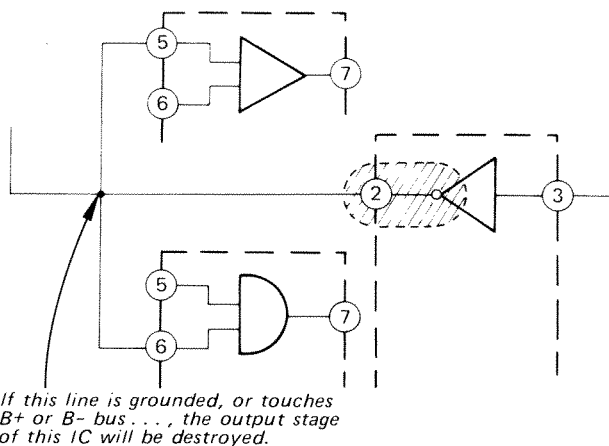

Fig. I

SECTION 1
OUTLINE

1-1. CIRCUIT OPERATION

This set is equipped with an LED peak program meter, which indicates the input signal level (as a bar graph).

The following explanations describe the operation of each of the circuit.

1. IC601 Input Circuit

Input signal **A** (waveform **A**) is amplified by Q107 and is applied to IC103 in the LOG converter circuit. By the characteristic of a diode, the input signal is logarithmically compressed and waveform **A** changes into waveform **B**.

The peak of signal **B** is detected by D105 and smoothed by C130, Then it is applied to terminal **(11)** of IC601 as dc voltage (waveform **C**). Q109 controls the input current which is applied to IC601.

2. LED Indication Circuit

The LEDs turn on when the anode signals (**D** - **G**) and the cathode signals (**H** - **O**) drop to a LOW level at the same time.

ex) LINE OUT output -5dB

D, **F** : LOW level

↓
waveform **H** - **O** : anode, cathode: LOW level

↓
L-CH/R-CH : LEDs 1~8 turn on
(See Diagram 1.)

O	8	16	8	16

Diagram 1.

(When either two of the signals **D** - **G**) and of **H** - **O** drop to LOW level, the LEDs shown in the diagram turn on.)

3. Peak Hold Reset Circuit

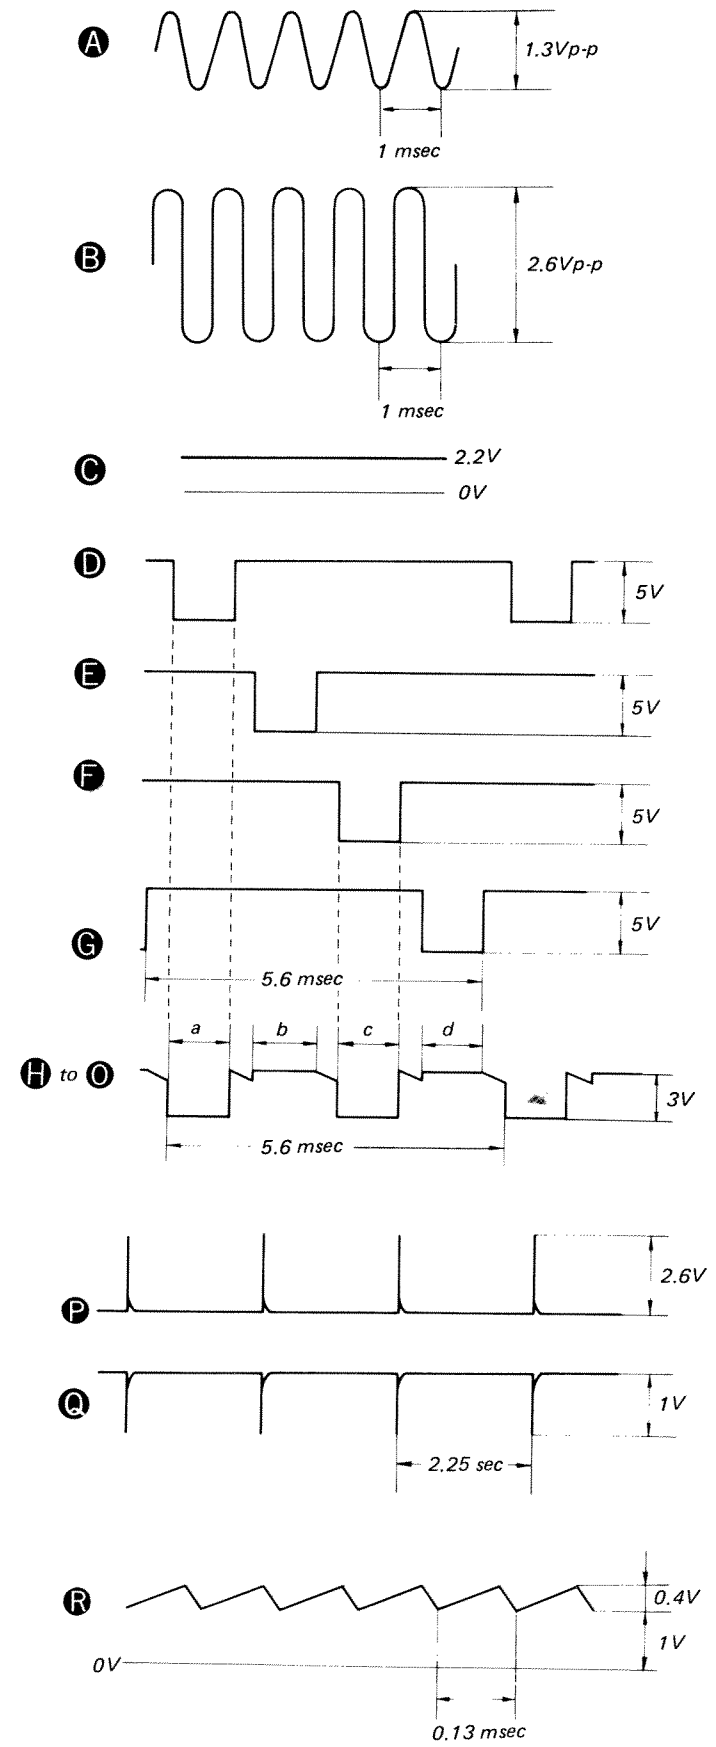

1) Mode: S7 **AUTO**

The trigger pulse generated by Q601 (PUT=Programmable Unijunction Transistor) is applied to the base of Q602. The reset signal is applied to the reset terminal **(12)** of IC601 at intervals of 2.25 seconds and the peak level is reset.

2) Mode: S7 **MANUAL**

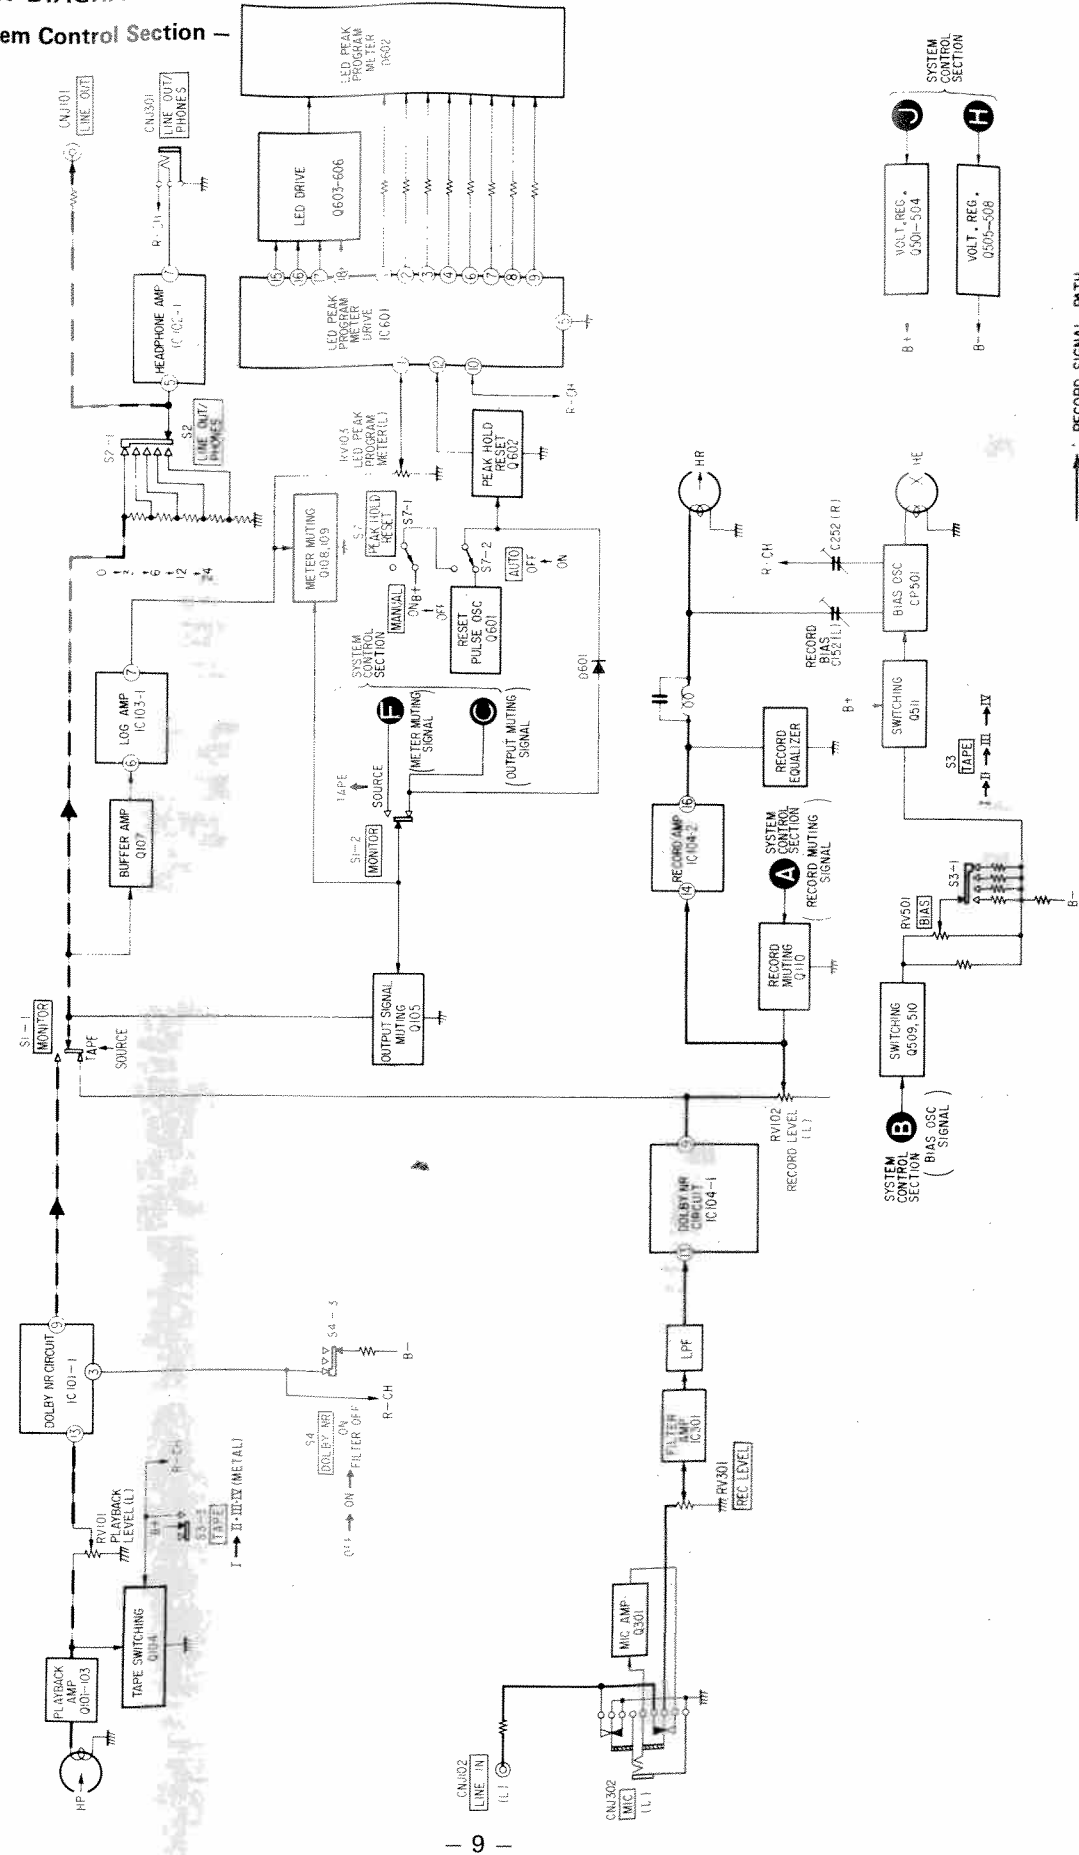

When the MANUAL switch is turned on, B+ voltage is applied to the base of Q602. Then reset terminal **(12)** of IC601 drops to a LOW level and the peak level is reset.

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

PRECAUTION

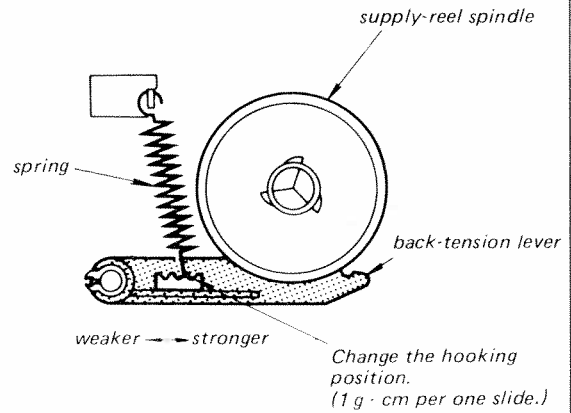

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch rollers
erase head	rubber belts
capstans	idlers
2. Demagnetize the record/playback head with a head demagnetizer.
3. Do not use a magnetized screwdriver for the adjustments.
4. After the adjustments, apply suitable locking compound to the parts adjusted.
5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

Torque Measurement and Back Tension Torque Adjustment

1.	Torque	Torque meter	Meter reading
	Forward	CQ-102C	28-50 g·cm (0.39-0.69 oz·inch)
	Back tension	CQ-102C	9-11 g·cm (0.13-0.15 oz·inch)
	Fast Forward, Rewind	CQ-201B	80-140 g·cm (1.12-1.94 oz·inch)

2. If the specified back-tension torque is not obtained, change the hooking position.

Head Height Adjustment

1. Prepare an adjustment cassette as shown below.

2. In playback mode and viewing from the front, adjust the head heights to eliminate tape curl and tape twist at portions shown by arrows.

Pinch Roller Pressure Measurement

– Forward Mode –

1. Confirmation

2. Slowly pull the pinch roller and read the spring scale or the tension gauge just when the pinch roller stops rotating.

3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

- Set the BIAS knob and TAPE switch according to the tape as follows.

Tape	BIAS knob	TAPE switch
CS-10	mechanical-mid	TYPE I
CS-25		TYPE II
CS-30		TYPE III
CS-40		TYPE IV

- Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch: OFF
 TAPE switch: TYPE I
 MONITOR switch: TAPE
 BIAS knob: mechanical-mid

- Standard Record:

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

	MIC	LINE IN
source impedance	300 Ω	10 k Ω
input level	0.77 mV (-60 dB)	0.25 V (-10 dB)

Standard Output Level

	LINE OUT	HEAD-PHONES
load impedance	47 k Ω	8 Ω
output level	0.44 V (-5 dB)	77 mV* (-20 dB)

*with LINE OUT/PHONES level control at "0".

Motor Gain Adjustment

1. Unsolder the pattern connection (marked **a**) on the servo amp board.
2. Connect the regulated power supply as shown below.
3. If the motor does not start rotating even when the POWER switch is turned ON, rotate the motor by hand.
4. Connect VOM to H1 and change the pattern connection for 4.25 V ac reading on VOM or adjust RV1003 for 4.25V ac reading on VOM.
5. Connect VOM to H2 and change the pattern connection for 4.25 V ac reading on VOM or adjust RV1004 for 4.25V ac reading on VOM.
6. After the adjustment, solder the pattern unsoldered in step 1.

HARDWARE NOMENCLATURE

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazer-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring
